

JavaScript Objects

Properties

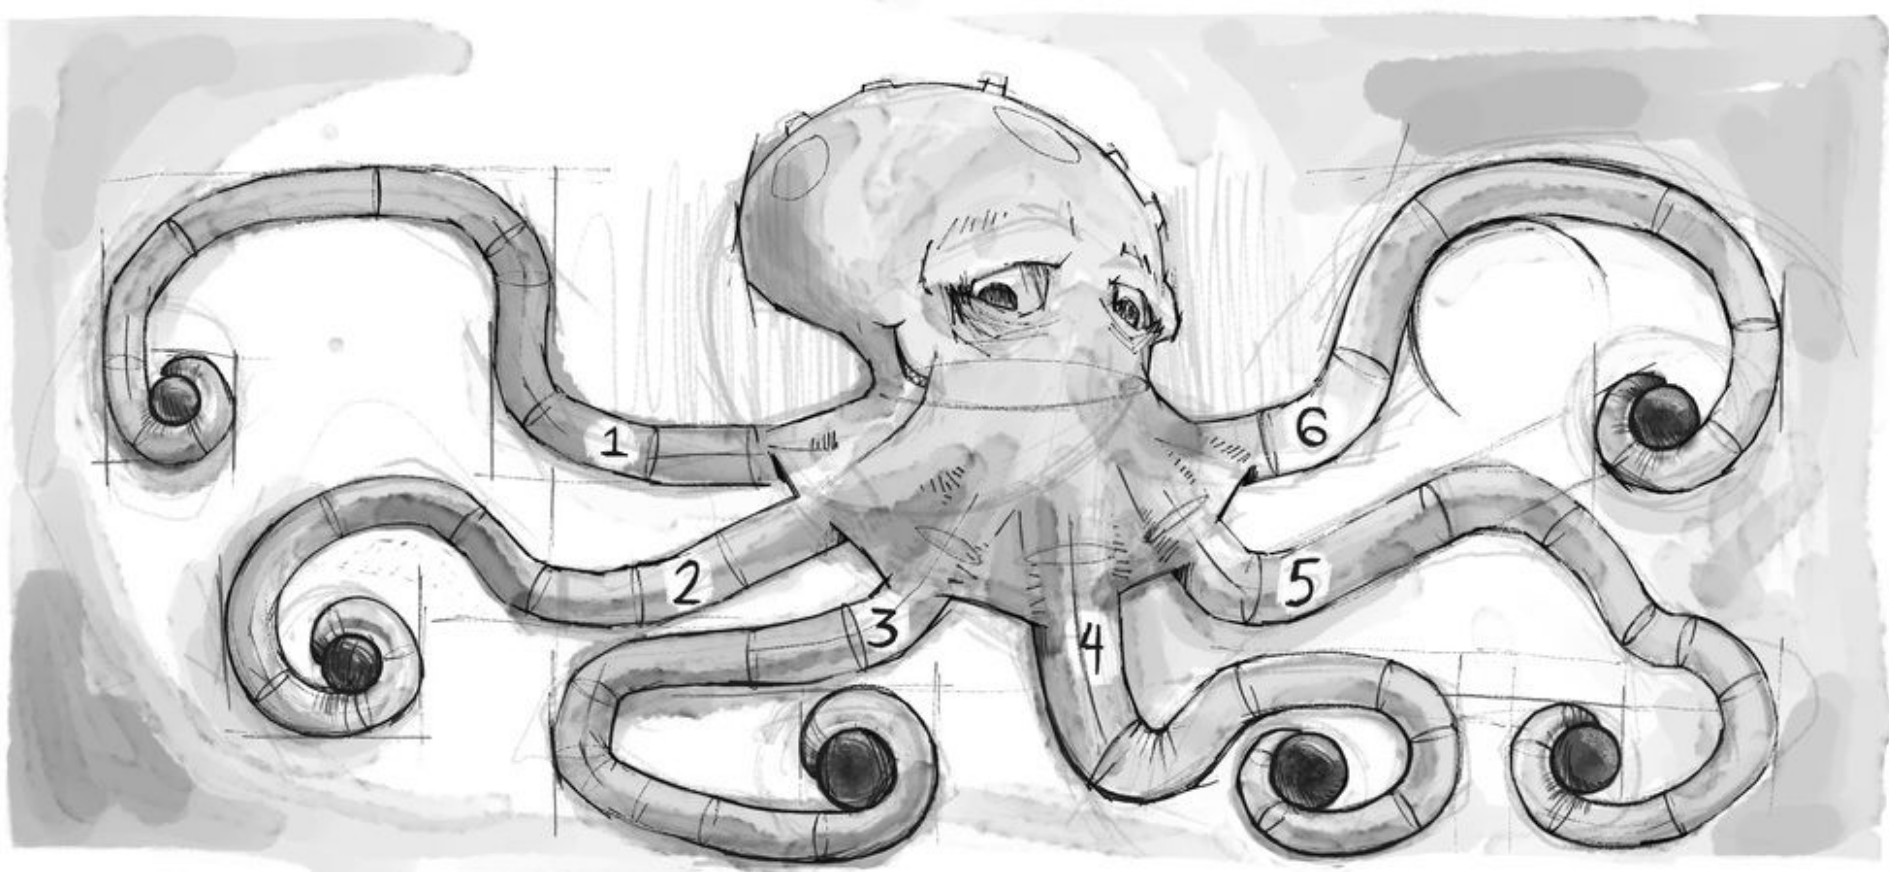

- Length
-

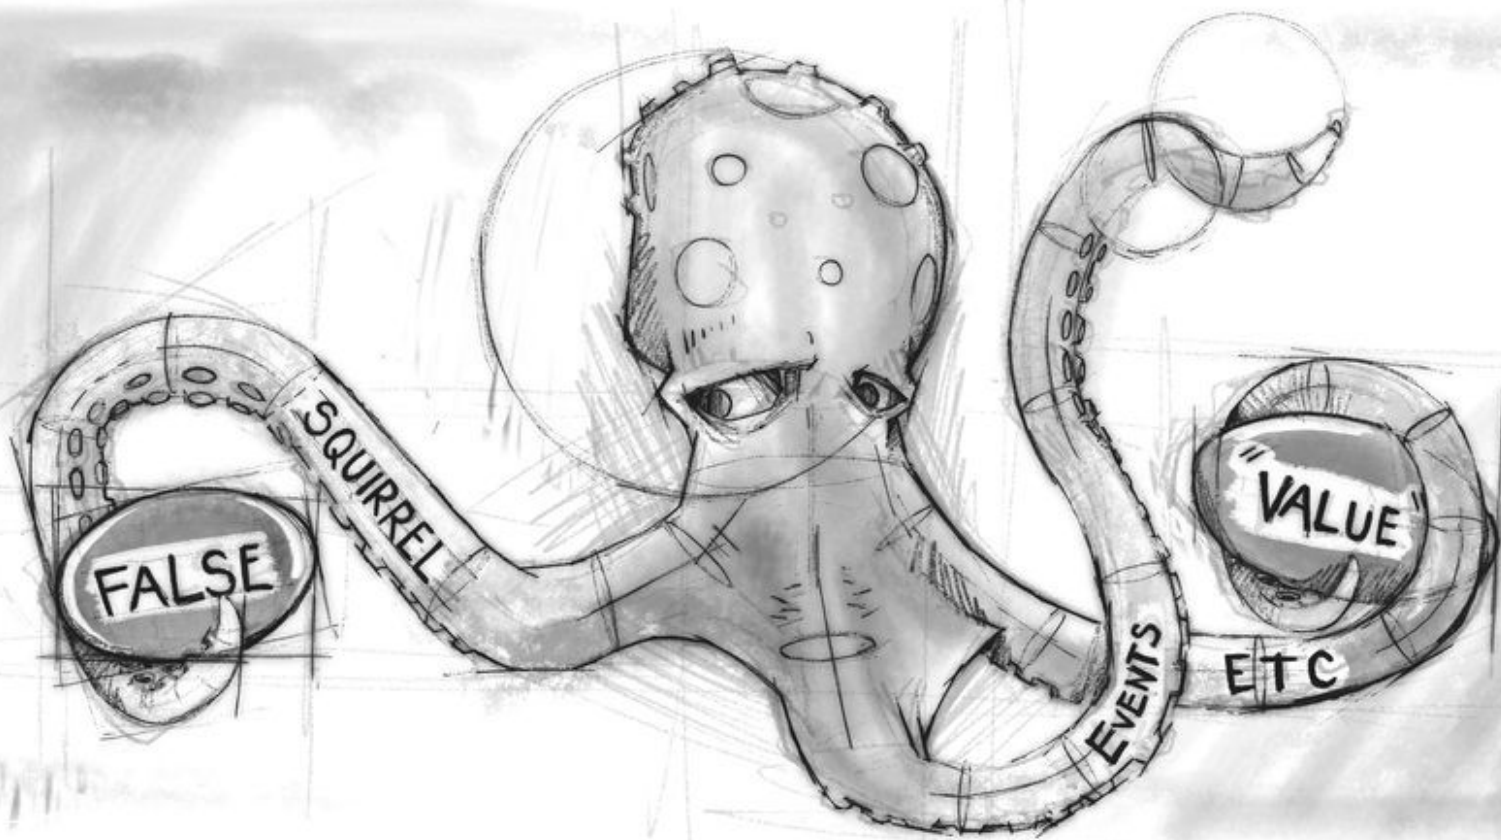

Methods

- `charAt()`
- `replace()`
- `search()`
- `substr()`

```
var pizzas = [];  
pizzas.push('Pepperoni');  
pizzas.push('Cheese', 'More Cheese');  
console.log(pizzas);  
console.log(pizzas.join(" "));  
console.log(pizzas.pop());  
console.log(pizzas);
```

Arrays are objects

Bio object

Properties

Coding time!

Methods

Changing values

Literal vs Constructor Notation

- What if you want to create many instances of that object?
- Example:
 - Website that will display animal cards
